ABOUT COMPANY

Noterd (Qingdao Noterd Technology) was established in 2015 and manufactures high-standard glass syringes for filling and packaging solutions. Our production facility, established in 2004, employs 320 registered staff, including over 80 specialized technicians.

Cannabis extracts are often high-viscosity and formulation-sensitive. Noterd provides multiple capacities and configuration options to match filling and dispensing needs for:

- THC/CBD/RSO oils, distillates, and concentrates
- Dab/dispensing use cases requiring controlled flow and accurate dosing
- OEM support for brands, including accessories and packaging options

HOT SELLING PRODUCTS

Glass Syringe 1ML

The 1ml glass syringe is the most popular choice in the cannabis extract market, primarily due to regional differences in THC product regulations. It comes in a fully sterile, sealed package, making it perfect for asepsis production workshop. Additionally, the packaging can be tailored to improve filling efficiency based on specific requirements.

Glass Syringes with Metal Plungers

The metal plunger offers a stronger and more stable force, making it ideal for high-viscosity extracts. Also known as an air-release syringe, the plunger features a valve at the top that releases air, ensuring the finished product is bubble-free and pure. Additionally, metal plungers in various colors can enhance brand image and product appeal.

WHITE-SCALED GLASS SYRINGES

The white-scaled glass syringe is specifically designed for dark cannabis extracts. Standard black markings become difficult to read once filled with RSO, FECO, or other dark concentrates, especially for elders. The white graduation lines create a strong contrast against the dark liquid, making the dosage much easier for consumers to read and measure. This clarity is particularly important for medical marijuana applications.

Wide Range of Glass Syringes

Our glass syringes are designed with precision and reliability, featuring **Luer** and **Luer Lock** connections to ensure compatibility with most filling and dispensing systems. With extensive industry experience, we offer a wide selection of plungers and accessories to support accurate handling of liquids with different viscosities.

HOW TO CHOOSE LUER OPTION

Choosing the right Luer option for glass syringes depends on the filling equipment and application.

The luer lock glass syringes are the most popular option for dispensing. It's more secure to lock with a blunt tip because the thick cannabis oil takes a

certain amount of pressure to release.

We can provide professional guidance based on the client's specific requirements.

STERILE NEST PACKAGING

Our borosilicate glass syringe line is available with standard medical packaging or customized solutions:

Sterilization Assurance: Each glass syringe is sterilized using Teflon dialysis bags (DuPont, USA) with a COA/COC for every batch.

Transportation Protection: Standardized nesting box packaging effectively safeguards every glass syringe in transit.

Automation Compatibility: The internationally unified nest-and-tub format is compatible with most automated filling machines and suitable for aseptic filling environments.

CUSTOMIZED SYRINGES

Custom glass syringes can enhance the visibility of your distillate brand in the market. We offer exceptional flexibility of customization. Complimentary digital mock-ups featuring your logo are available for review before placing your order.

Personalization options include:

Custom Measurements

Logo Placement

Components Color

VARIETY OF UNIQUE INDIVIDUAL PACKAGING

To help clients save time and simplify sourcing, we offer tailored packaging for glass syringes on request and maintain quick-release molds for trending market formats. You can further personalize packaging with your own design, logo, size, and labeling.

APPLICATION OF GLASS SYRINGE

Syringe for Full-spectrum extracts

Glass syringes are a practical, reliable way to dispense thick, potent full-spectrum extracts like RSO or FECO in small, precise doses with minimal waste.

Syringe for Distillate Syringe

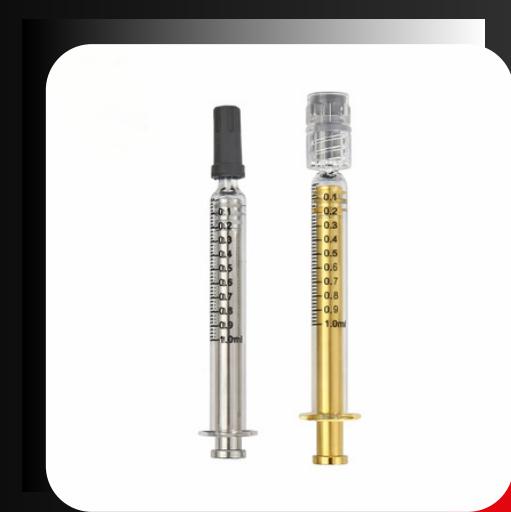

Distillates require clean, repeatable dosing; a sealed glass syringe enables precise measurement and application while keeping the oil controlled and sanitary.

Syringe for vape Cartridges

When refilling vape cartridges, a slim glass vapor syringe provides controlled dispensing that directs oil into the cartridge, minimizing spills and air bubbles.

BENEFITS OF BOROSILICATE GLASS SYRINGES

01

Precise Dosing for High-Potency Extracts

02

Heat-Resistant glass for heating directly

03

Good sealing keeps the contents fresh

04

Chemical Inertness Preserves Purity

05

Sterile packaging makes it clear and hygiene

06

Compact and regulatory-compliant

WHY GLOBAL BUYERS CHOOSE US

■ Average Turnaround Time: 7 Working Days

■ Expert Guidance for Proper Application

■ Duty-Free Door-to-Door Service Available

■ Efficient Scheduling to Save Time and Money

■ Support for One-Stop Packaging Solutions

■ Diverse, Flexible, Secure Payment Options

FAQ

What is the minimum order quantity (MOQ)?

The MOQ for ready stock glass syringes is one nest box - 100pcs for 1ml/2.25ml/3ml; 64pcs for 5ml.

Can the syringes be filled with hot liquids?

Yes. It can withstand high temperatures and is suitable for filling warm oils and liquids.

Can I request the fully assembled glass syringes?

Yes. We offer OEM service, including printing, colors, and packaging methods as per requirements.

Is there a glass syringe without graduation marks?

Yes. All syringe sizes are available with or without graduation marks, based on your preference.
